Calculation policy

Division

Divide numbers up to 4-digits by a 1-digit number including remainders

Place value counters can be used on a place value grid to support this understanding of short division.

Children can also draw their own counters and group them through a more pictorial method.

| | | | |
|---|---|---|----|
| | 2 | 1 | 4 |

The same method applies for a 4-digit number.

When children begin to divide up to 4-digit by 2-digit, written methods become the most accurate as concrete and pictorial representations become less effective. Children can write out multiples to support their calculations with larger remainders.

Calculation policy

Division

$$10 \times 15 = 150$$

Children can also divide by 2-digit numbers using long division.

Children can write out multiplies to support their calculations with larger remainders.

When a remainder is left at the end of the calculation, children can either leave it as a remainder, convert into a fraction or a decimal answer.

$$\begin{array}{r}
 & & 2 & 4 \\
 & & \boxed{3} & 7 & 2 \\
 1 & 5 & - & 3 & 0 & 0 \\
 & & & 7 & 2 \\
 & & - & 6 & 0 \\
 & & & 1 & 2 \\
 \hline
 & & 4 & & 5
 \end{array}$$

This will depend on the context of the question.
